CLAIMS:

1. A juice extractor comprising:
a vessel having an internally threaded sidewall,
5 a juice-extracting dome positioned within the vessel,
a plunger attached threadedly to the vessel sidewall
for pressing fruit against the dome when a plunger is
rotated, and
a spout extending from the vessel through which juice
10 extract from the fruit can pass to an external receptacle.
2. The juice extractor of Claim 1 wherein the dome has
an annular flange formed integrally therewith and having a
plurality of apertures through which juice can pass en
15 route to the spout.
3. The juice extractor of Claim 1 wherein the dome is
serrated.
- 20 4. The juice extractor of Claim 1 further comprising a
base to which the vessel is attached, the base comprising
a suction cup by which the juice extractor can be fixed to
a bench top.
- 25 5. The juice extractor of Claim 4 further comprising a
spindle mounted rotatably to the base and attached
threadedly to the suction cup and adapted upon rotation to
draw a central portion of the suction cup upwardly and

away from the bench top to induce a vacuum between the suction cup and the bench top.

6. The juice extractor of Claim 4 wherein the vessel is
5 a bayonet-secured to the base.

7. The juice extractor of Claim 6 comprising a key-way
into which a key is received to prevent rotation of the
vessel with respect to the base.

10

8. In combination with the juice extractor of Claim 1, a
handle attached to and extending radially from the plunger
to assist in rotating the plunger.

15 9. The combination of Claim 8 wherein the plunger has a
splined exterior and the handle comprises a ring having a
splined interior that mates with the splined exterior of
the plunger.

20 10. In combination with the juice extractor of Claim 5 a
handle attached to and extending radially from the spindle
to assist in rotating the spindle.
